Quantis Healthcare Analytics Reports

Strengthen your relationship with the NHS

A tailored healthcare insight report designed to help your customers to understand the ever-changing NHS secondary care landscape.

Reports can be turned around quickly to help you identify anomalies, trends and opportunities for improvement within your areas of focus. This provides you with an excellent starting point to engage your NHS customers.

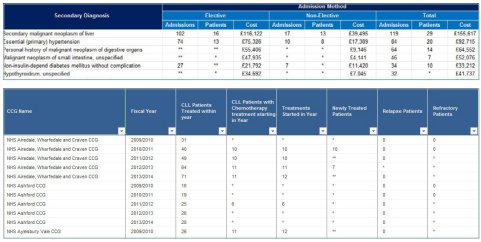
Part of the Quantis portfolio which also includes the core dashboards and iPad app, our healthcare analytics reports are at the heart of our NHS Service Improvement solution set designed to deliver compliant healthcare intelligence, fast.

Work with your customers to help identify areas of improvement using complex real world data presented in simple ways.

By:

- ***Identifying*** where service efficiencies and patient outcomes can be improved
- ***Increasing*** the appropriate diagnosis, management and awareness of a disease
- ***Mapping*** performance locally and nationally where specialist teams/resources are in place
- ***Providing*** collaborative service solutions that address healthcare inequalities
- ***Generating*** reliable evidence to inform your customer decision makers

Basic tabulations



Secondary Diagnosis	Admission Method								
	Elective			Non-Elective			Total		
	Admissions	Patients	Cost	Admissions	Patients	Cost	Admissions	Patients	Cost
Secondary malignant neoplasm of liver	102	16	£116,122	17	13	£38,495	119	29	£155,617
Essential (primary) hypertension	74	13	£75,326	10	8	£17,389	84	20	£92,715

HOW

We process record level, pseudonymised, non-sensitive, Hospital Episode Statistics (HES), Diagnostic Imaging Dataset (DIDs) and the Mental Health Services Dataset (MHSDS) under the licence from NHS Digital.

We combine this data with other publicly available data such as Quality Outcomes Framework (QOF), GP Prescribing (often referred to as PLP, RX), National Diabetes Audit (NDA), Patient Experience Surveys, Admitted Patient Care (APC), Outpatient (OP), Accident & Emergency (A&E), Critical Care (CC) etc.

We produce unique insights on patient pathway and longitudinal analyses to provide a full, complete picture of secondary care treatment to create a case for change for the NHS.
