

iPad App

Insight at your fingertips when you need it.

The Quantis iPad App is the simple and effective way to have the data and insight you need when you are in the office, on the move or in front of a customer. It automatically connects and refreshes data when connected but can also be used offline. So, you never have to worry about connectivity in that important meeting.

The Quantis iPad App employs an unbeatable range of data sources that allows you to cross reference five-years of healthcare data, that can be combined with your own data sources to demonstrate the most complete picture possible.

The Quantis iPad App is configured to deliver the insight you need. Our consultants will work with you to design the app to meet your objectives ensuring fast and flexible access to the information you need to deliver real value to your customers at any time.

Help your customers see the complete picture.

Quantis allows you to paint a complete picture of specific areas pertinent to your customer, creating the case for change supported by real world compliant healthcare data.

- Identify where service efficiencies and patient outcomes can be improved
- Increase the appropriate diagnosis, management and awareness of a disease
- Map performance locally and nationally where specialist teams/resources are in place
- Provide collaborative service solutions that address healthcare inequalities
- Generate reliable evidence and demonstrate the advantages to your key customers
