

Pharmacists are experts in medicines and how they work; and play a key role in providing quality healthcare to patients. They use their clinical expertise together with their practical knowledge to ensure the safe supply and use of medicines. The hospital pharmacist is part of a hospital team, providing, preparing and dispensing medicines to patients who are or have been treated in the hospital.

Database of NHS Pharmacists provides a comprehensive source of hospital-based pharmacists throughout the NHS.

All information within the database is regularly primary source verified and updated by our specialist team of researchers; giving you the quality, targeted data you need and the reassurance that you will be GDPR compliant.

The data can be segmented to enable targeting of campaigns by:

- Clinical services
- Department
- Job responsibility
- Organisation type
- Specialty

### Database contents

There are 18,766 named individuals on the database.

Responsibility/Role	Count
